

## **Chapter FIVE: WHAT DO YOU SEE ?**

### **Page 42**

- Using just one crayon between two mirrors, one can see different geometric shapes. The smaller the angle between mirrors, the fewer the sides. The triangle shape will appear for the lowest angle and the hexagon shape will appear for the largest angle.
- The number of fish between two mirrors that are facing each other is infinite. The number able to count varies . 6 is the average number.

### **Pages 43-45**
